

uAttend Smartphone App Security Statement

To allow mobile employees to record their hours, uAttend uses a Smartphone app. The uAttend Smartphone App is available for Apple iOS and Android compatible phones and tablets.

Employees simply tap the Punch button to record their In and Out clockings.

The uAttend app takes a snapshot of the phone location using the smartphone's Location Service at the time of the clocking. As the location is only recorded at the time of clocking, uAttend cannot be used to track employee movements

As uAttend only uses the Location Service at the time of clocking, it uses very little of the user's data allowance and its power requirement is minimal. Only 1 or 2 kilobytes of data are used for each clocking transmission.

For absolute clarity, the uAttend app does not transform Smartphones into tracking devices and has a negligible impact on the device's data usage or battery life.

Benefits to the employee include the following:

- An easy way to record entry and exit times - no more writing them down.
- Accurate payroll information created to ensure accurate payment of hours. No more having to query pay slips.
- The uAttend app is not an "Always On" app, so its battery usage is very low too
